

Test Data

SmartSociety — Web-Based Housing Society Management System

Source Backend/src/scripts/seedUsers.js + manual verification

Date August 2026

1 Seed Baseline

Running `npm run seed` from `Backend/` creates one flat and the three fixed demo accounts below. The script is idempotent — re-running it skips any row that already exists — because the API itself has no route to create the very first Admin or Guard.

ROLE	USERNAME	PASSWORD	NOTES
Admin	Admin	admin123	S. Krishnan
Guard	guard.gate2	guard123	Manoj Yadav · Gate 2, Main Entrance
Resident	Resident	resident123	Aarav Mehta · seeded into the flat below

FLAT	OCCUPANCY	CARPET AREA	MEMBERS
Tower B – 204	Owner	950 sq ft	3

2 Accounts Created During Verification

Additional accounts created through the app itself (Admin → onboard resident, Admin → Staff Management) while exercising each feature end to end. Their passwords are system-generated at creation time, shown once to the admin in a credentials modal, and not stored in recoverable form afterward — consistent with how a real deployment should handle temporary passwords.

ROLE	USERNAME	NAME	CREATED VIA
Resident	neha.sharma.final	Neha Sharma	Admin → onboard resident (Tower B – 301, Tenant)
Guard	ravi.kumar	Ravi Kumar	Admin → Staff Management → Portal Staff
Guard	sunita.devi	Sunita Devi	Admin → Staff Management → Portal Staff

Portal staff created for complaint routing carry the `Guard` role at the database level, since the schema's role enum only distinguishes Admin, Resident, and Guard — the same three roles the SRS defines. "Staff" is a usage of the Guard role for routing purposes, not a fourth authentication role.

3 Non-Login Directory Data

Service staff and amenities are admin-maintained records with no login of their own.

NAME	TRADE	STATUS
Iqbal Hussain	Plumber	Active
Bilal Ahmed	Electrician	Active
Asad Ali	Facility Manager	Active

AMENITY	CAPACITY	AVAILABLE
Swimming Pool	20	Yes

4 Transactional Sample Data

Created by exercising each workflow as its respective role — not synthetic filler.

BILL	FLAT	PERIOD	TOTAL DUE	STATUS
#1	Tower B – 204	September 2026	Rs 5,100	Paid

COMPLAINT	CATEGORY	PRIORITY	STATUS	ASSIGNED TO
#1	Plumbing	Medium	Closed	guard.gate2
#2	Electrical	Urgent	In-Progress	sunita.devi
#3	Electrical	High	Pending	Unassigned

VISITOR	GATE-PASS CODE	STATUS	PURPOSE IN TEST PLAN
John Doe	785713	Exited	Standard pre-approve → verify → exit flow
Yahya	423122	Pre-Approved	Left pending to demonstrate the guard verification screen
Overstay Test Visitor	769143	Exited	Backdated entry timestamp used to trigger the overstay monitor job

5 Resetting to a Clean State

FOR A FRESH EVALUATION RUN

Drop and recreate the `smart_society` database, import `Backend/database/smart_society_schema.sql` to restore the table structure and audit-immutability triggers, then run `npm run seed` to restore the three baseline accounts. Everything in sections 2–4 was created by using the running application and is not required for the schema itself to function.
