

User Credentials

SmartSociety — Web-Based Housing Society Management System

Applies after `npm run seed`

Date August 2026

1 Demo Accounts

One account per role, created by the seed script described in the Installation Instructions document. Each demonstrates a different portal.

Admin S. Krishnan — society administrator

USERNAME Admin

PASSWORD admin123

Resident Aarav Mehta — Tower B, Flat 204 (Owner)

USERNAME Resident

PASSWORD resident123

Guard Manoj Yadav — Gate 2, Main Entrance

USERNAME guard.gate2

PASSWORD guard123

2 Logging In

Login is two-step for every role: enter the username and password above, then check the console the backend is running in (or the on-screen "preview email" link, if SMTP is not configured) for a 6-digit code and enter it on the next screen. This is not a demo shortcut — it is the system's actual login flow, described in the Design Specification document.

3 Accounts Created Through the App

Additional accounts exist from exercising Admin onboarding and staff management — see the Test Data document for the full list. Their passwords are system-generated and shown once at creation time, so they are not reproduced here; use the accounts above, or create new ones from the Admin portal, to explore those flows.

ROLE	USERNAME	CREATED VIA
Resident	<code>neha.sharma.final</code>	Admin → Resident Management → Onboard
Guard (portal staff)	<code>ravi.kumar</code>	Admin → Staff Management
Guard (portal staff)	<code>sunita.devi</code>	Admin → Staff Management

4 Recovering Access

FORGOT PASSWORD

The Login screen's "Forgot password" link sends a real, time-limited (30-minute) reset link to the account's email — delivered the same way as the login OTP (real SMTP if configured, otherwise a console-logged preview link). There is no "use another method" bypass; this is the only recovery path, matching a real deployment.
